Epic 1: Loan Application & Risk Assessment

Story 1.1 — Apply for Loan

As a borrower, I want to submit a loan application so that I can request funding.

Story 1.2 — Assess Credit Risk

As a borrower, I want the system to calculate my credit risk score so that lenders can evaluate my application.

Epic 2: Repayment Management

Story 2.1 — Generate EMI Schedule

As a borrower, I want an EMI repayment schedule so that I know my due dates and outstanding balance.

Story 2.2 — Make Repayment

As a borrower, I want to make loan repayments so that my loan remains in good standing.

Epic 3: Peer Lending Marketplace

Story 3.1 — Browse Loan Listings

As a peer lender, I want to filter loan requests by risk tier, amount, and tenure so that I can choose suitable investments.

Story 3.2 — Fund Loan

As a peer lender, I want to fund approved loans so that borrowers receive the requested amount.

Epic 4: Default Monitoring & Compliance

Story 4.1 — Default Warning

As a compliance admin, I want overdue repayments to trigger warnings so that lenders are notified.

Story 4.2 — Review Risk Audit Log

As a compliance admin, I want to review audit logs so that I can monitor platform activity.

Epic 5: Security & Data Protection

Story 5.1 — Secure Transactions

As a lender, I want repayments processed securely so that financial records remain accurate.

Story 5.2 — Encrypt Borrower Data

As a borrower, I want my financial information encrypted so that my data remains private.

Epic	Description
Loan Application & Risk Assessment	Borrowers apply for loans and receive a risk score.

Repayment Management Generate EMI schedules and manage repayments.

Peer Lending Marketplace Allow lenders to browse and fund loans.

Default Monitoring & Compliance Detect missed payments and notify admins.

Security & Data Protection Protect borrower financial information.

These map to FR-001–FR-005 and NFR-001–NFR-002.

	LSP-8	Burndown	Issue completed	5		8
	LSP-10	Burndown	Issue completed	3		5
	LSP-11	Burndown	Issue completed	5		0
01/Sep/26 8:46 PM	LSP-10	Sprint ended by Pravith Mohandas				0
	LSP-11					0
	LSP-6					0
	LSP-7					0
	LSP-8					0
	Total					0

1. What went well?

The high-priority features, including loan application, credit risk assessment, and EMI schedule generation, were organized according to business value. Breaking the project into epics and user stories made the backlog easier to manage, and assigning story points helped prioritize the most important work.

2. What was challenging?

Estimating story points was challenging because features like credit risk assessment and default warning notifications involved multiple business rules, including repayment history, debt-to-income ratio, employment stability, and loan funding conditions.

3. What did the burndown chart show?

The burndown chart showed a steady reduction in the remaining work as user stories moved from To Do to In Progress and finally to Done, indicating that both mock sprints progressed as planned.

4. What could be improved?

Future sprints could use historical velocity to estimate work more accurately and avoid overcommitting to complex features such as risk scoring and repayment management.

5. What was learned?

The project demonstrated how Agile Scrum helps organize software development by breaking a large project into epics, user stories, and manageable sprints. It also showed the importance of prioritization, story point estimation, and sprint tracking through Jira's burndown chart.

Summary – Micro-Lending & Peer Credit Risk Assessor (Lab 2)

This project applied Agile Scrum principles in Jira to plan and manage the Micro-Lending & Peer Credit Risk Assessor system. The project was divided into epics and user stories covering loan applications, credit risk assessment, EMI repayment management, peer lending, default monitoring, and security. Story points were assigned using the Fibonacci sequence, priorities were set based on business value, and the work was completed through two simulated one-week sprints. The burndown chart showed steady progress as tasks moved from To Do to In Progress and Done, demonstrating how backlog prioritization, sprint planning, and progress tracking help organize software development effectively.
